

Using Word Documents in Moodle:

What to do when a Word document is blocked by Internet Explorer:

Currently, on many campus computers and some off-campus computer, when a user clicks on a link to access a Word document in Moodle an "*information bar*" appears just above the Moodle frame, as displayed below.

This happens because of a security setting in Internet Explorer. To get around this, simply follow the instructions on the *information bar* to "**Click here for options ...**" From the options listed, select "**Download File...**" This should cause a *File Download window* to appear where you need to select **Open**. The Word document should now open in Moodle.
